

SSL VPN SOLUTIONS FOR GROWING SMALL AND MID-SIZED BUSINESSES

SonicWALL

Today, even the smallest business competes in a global marketplace.

A growing organization still needs world-class secure remote access solutions that larger organizations receive from using SonicWALL SSL VPNs. But smaller organizations must pay particular attention to getting the most-needed SSL VPN features at an affordable price and with minimal IT overhead. SonicWALL SSL VPNs let you compete on an even playing field, with robust solutions for small and mid-sized businesses:

Remote Access: Provides secure remote access to the most resources from the most end point locations.

REMOTE ACCESS DEPLOYMENT SCENARIO

Need: Employees such as travelling sales representatives and telecommuters working from home need secure easy access from anywhere to corporate network resources.

Solution: A SonicWALL SSL-VPN 2000 deployed in one-arm mode alongside a SonicWALL NSA 2400 or virtually any other third party firewall.

Results: Using only a Web browser, remote users are able to securely access corporate network resources from anywhere outside the corporate LAN, whether it's from a corporate laptop used in a hotel room or their home computer.

Disaster Recovery: Allows your workforce to remain productive from anywhere, anytime—even during unexpected business-infrastructure disruptions like severe weather, power outages, or transit strikes.

Clean Wireless: Integrates seamlessly with SonicWALL wireless access solutions using SonicWALL TZ 180 or PRO Series appliances and SonicWALL SonicPoints, as well as third-party wireless infrastructure.

Extranet: Extends authorized access to business partners and suppliers, to increase collaboration and productivity without compromising security.

Mobile Device Support: Added flexibility for your remote users to obtain secure access from Windows Mobile devices.
